

7" Capacitive Graphical Operation Terminal designed for building automation

SmarteH's new 7" capacitive Graphical Operation Terminal is innovation of unique modern design with integrated Programmable Logic Controller (PLC) functionality.

With our new capacitive Graphical Operation Terminal LPC-3.GOT.011 you are able to control various building segments from one touch panel. Controlling of ventilation, temperature and lighting are some of the segments that our new touch panel provides you in residential or commercial buildings.

Frameless glass screen offers an intuitive, clear and flexible interface between the user and the building.

Screen pictures, control buttons, status images can be easily programed to match individual high end design requirements.

Graphical Operation Terminal supports Ethernet Modbus TCP/IP Master and/or Slave, Modbus RTU Master, CANopen Master and Slave. The application program can be transferred and debugging can be done remotely over the Ethernet. USB port can also be used for programming and debugging in the local.

Graphic Operation Terminal has an integrated Micro SD card, Setting Storage FLASH, RTC, NV RAM which doesn't need the battery for its functioning.
