

7" Resistive Graphical Operation Terminal designed for industrial automation

SmarteH's new 7" resistive Graphical Operation Terminal is innovation of robust design with integrated Programmable Logic Controller (PLC) functionality. It offers high performance in any industrial environment.

Our new resistive Graphical Operation Terminal LPC-3.GOT.001 provides a clear, customised and flexible interface between the user and the machine.

Screen pictures, control buttons, status images, trends, schedules and other can be easily programmed to match individual human to machine requirements.

Graphical Operation Terminal supports Ethernet Modbus TCP/IP Master and/or Slave, Modbus RTU Master, CANopen Master and Slave. The application program can be transferred and debugging can be done remotely over the Ethernet. USB port can also be used for programming and debugging in the local.

Graphic Operation Terminal has an integrated Micro SD card, Setting Storage FLASH, RTC, NV RAM which doesn't need the battery for its functioning.
